

Java

```
class Solution {  
    public long countPairs(String[] words) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string[]} words  
 * @return {number}  
 */  
var countPairs = function(words) {  
  
};
```

TypeScript

```
function countPairs(words: string[]): number {  
  
};
```

C++

```
class Solution {  
public:  
    long long countPairs(vector<string>& words) {  
  
    }  
};
```

C#

```
public class Solution {  
    public long CountPairs(string[] words) {  
  
    }  
}
```

Kotlin

```
class Solution {  
    fun countPairs(words: Array<String>): Long {  
  
    }  
}
```

Go

```
func countPairs(words []string) int64 {  
}  
-----
```
